Shark expert Chris Fallows and legendary producer Jeff Kerr have paired up once again on a quest to learn more about the great white sharks of Seal Island, South Africa. Armed with new technology and in their quest to learn more about the ultimate apex predator, they are risking their lives to capture the ultimate close-up of the legendary 14-foot great white shark known by the local community as Colossus. What they find may be more shocking than anyone could have imagined.

Never before has the underwater world been filmed so beautifully. Magic of the Big Blue is a seven-part series, featuring the seas and oceans surrounding the seven continents. A precious sanctuary in the midst of the Pacific Ocean, Hawaii is home to a wealth of exotic wildlife. Exploring the archipelago’s incomparable scenery, Wild Hawaii captures stunning views of the most isolated islands on the planet. From apocalyptic active volcanoes to lush forests filled with unique creatures to lava-blackened shores to idyllic white-beached desert islands, wildlife here thrives in extraordinary numbers and diversity. Experience the beauty of these pristine fingers of land and gain a through understanding of the extraordinary people and wildlife that call this Pacific jewel home.

A team of wildlife cameramen, led by Shark Week veteran Andy Casagrande, head to Gansbaai, South Africa to try to secure a shot that many have not been able to get—a great white shark’s Polaris breach. Their remarkable footage has an unprecedented close-up view of the shark as it breaches and peaks against the sky. There’s a hidden fourth world about to explode: the world of slums. These sub-populations survive in the direst of circumstances, excluded from mainstream society. What’s more they’re growing at an alarming rate. In 2007, one billion people lived in slums; by 2030, it will be two billion. This eye-opening investigation brings us inside the world’s shanty towns and explores the reasons for their rapid expansion and the consequences if this mass of deprived humanity is ignored.

Located on the Santa Fe Trail where the Rockies fade into the Great Plains – Trinidad, Colorado – this one-time mining town, is an unlikely destination for more than 6,500 transsexuals who have gone there to align their bodies with their minds. Trinidad uncovers the town’s transformation from Wild West outpost to “sex-change capital of the world,” and follows three transgender women who may steer the rural ranching town toward becoming the “transsexual mecca.”

The mysterious pull of an old Spanish Gypsy art on contemporary musicians in Los Angeles is the essence of Kumpania. We see how these musicians and dancers inspire each other to reach new heights of artistry performing traditional Flamenco. What the extraordinarily talented and dedicated performers (singers, guitarists, and dancers) in this film are practicing and carefully upholding is “flamenco puro” – the style of flamenco that most closely reflects its origins among the oppressed Gypsies in southern Spain in the 1700s. Flamenco at its core is an expression of deepest emotional truth – whether that is pain, isolation, loss or celebration, or all of those. It is done well and authentically in Kumpania and it is absolutely mesmerizing.

Millions of people live in the shadow of active volcanoes. They are constantly at risk from these sleeping giants. From massive volcanoes submerged beneath Italy, to the Yellowstone “super-volcano” in the United States, the question isn’t if these will erupt, but when. Now Curiosity goes around the world to find out how scientists are attempting to predict when a deadly volcanic eruption will occur.

Hurricane Sandy is one of the most treacherous weather events to hit the United States. But how did it become so powerful and what lessons have we learned? Using footage captured by survivors’ own cameras and smartphones, we go on the ground to reveal stories of those whose experimental experiences were transformed into critical phenomena combined to create the perfect storm and how we can prepare for the next one.

It is one of the most enduring legends of the sea – the story of the Bermuda Triangle. Theories to explain mysterious disappearances range from alien abductions to giant methane bubbles. We will build giant experiments to test these theories: Can we knock a plane out of the sky with a methane bubble or sink a ship by creating a rogue wave?

From predicting a volcanic eruption to why wolves are decimating the elk population, Yellowstone researchers have many questions. New imaging technologies and live unfolding events allow scientists to expose the wonders of Yellowstone National Park.

Are we truly in command of our own minds or can a word or gesture turn us into puppets for others to control? To find out, a group of leading experts and researchers embark on an audacious experiment to see if ordinary people can be brainwashed and turned into puppets.
